

Drive New Revenue and Profits with Security-as-a-Service

Services are the key to success as an MSP/MSSP, and now you can go beyond IDS-as-a-service or firewall-as-a-service. **Stellar Cyber delivers a comprehensive view of your customers' security** and automatically detects anomalies, investigates the causes, and responds to threats as no other solution can. **Stellar Cyber's software reduces alert fatigue** by correlating anomalies across physical, virtual, container and cloud environments, enabling threat hunters to respond in seconds or minutes. Built-in multi-tenancy enables you to create security templates that quickly bring new customers on board.

Security is About Applications, Not Tools

Leverage a new way of thinking about security detection and response. Go beyond automation – with Stellar Cyber's **Starlight – the first open detection and response (Open-XDR) platform**. Empower your security analysts with a Security App Store offering 18 tightly-integrated applications on one customizable workbench to deliver faster and more accurate data.

Choose what you need without additional cost in an open ecosystem that leverages existing firewall and endpoint infrastructure. Natively integrate network, endpoint and cloud security data to detect, respond and stop sophisticated attacks. **Starlight's GUI follows the whole kill chain, ensuring analysts get up to speed quickly. It's days versus months of training.**

Stellar Cyber Solves the Data Deluge Problem

It's hard to respond quickly to customer needs when you're drowning in data. **Starlight delivers the broadest security data collection engine to ensure that you see the whole picture**, and its data processing pipeline curates all security data to weed out unimportant events so your analysts can focus on real threats to respond in minutes. Stellar Cyber's patented Interflow™ streamlines anomaly detection and investigation by creating context among events, and context is fundamental to any advanced threat-hunting strategy. Additionally, Interflow normalizes security data shared between integrated applications and third-party applications, driving single-pane-of-glass visibility and control across security toolsets so **your analysts can watch and respond 7/24.**

Provide **comprehensive security** throughout your customers' infrastructure

Improve visibility, **detect** anomalies and **respond** automatically

Supercharge analyst productivity while slashing attack response times

Driving New Revenue

Become a trusted MSSP through high value and 'sticky' security services

Compete more effectively by offering tailored and comprehensive suite of services

Drive new revenues with SOC-as-a-service for mid marketing customers

Launch managed detection and response (MDR)-as-a-Service as a differentiator to enter strategic accounts

Easily bundle services for SMBs by leveraging the integrated App Store

Open API-s for integrating into your existing tools and end points

Increase Service Margin

Achieve visibility across physical, virtual, container and cloud data

Build customized security workbenches for analysts from 18 tightly-integrated security apps

Streamline anomaly detection and investigation by creating context among events with Starlight's patented Interflow™ technology

Increase SOC productivity – streamline operational processes to a single console by consolidating alert triage, detection and response across your on-premises and cloud environments

Eliminate the alert backlog with automated root cause analysis and timeline views, lowering the skill level required to evaluate and analyze alerts.

Gain insights into advanced threats – uncover malicious insiders, policy violations, external threats, ransomware, file-less and memory-only attacks and advanced zero-day malware
