

Only Stellar Cyber Dramatically Improves SOC Analysts' Confidence and Productivity

by automatically piecing complex attacks together across cloud, endpoint, network, user, applications and SaaS

Stellar Cyber—Intelligent Next Gen Security Operations Platform—1st to be Powered by Open-XDR

Leverages the tools and telemetry you trust like a security blanket, wrapping it all together by ingesting all SOC data into a single platform, which integrates your existing tools with tightly integrated natively supported capabilities.

- **Single license, pre-configured security operations platform deploys easily on premises, in public clouds and with service providers.**
- **Capital costs go down as you sunset stand-alone tools you no longer need.**

Visibility Through Normalization and Enrichment

Stellar Cyber delivers a comprehensive view of your attack surface from all data sources—radically reduce complexity through normalization and enrichment of data, driving time to identify from days or weeks to seconds.

Improve Fidelity of Existing Investments

Stellar Cyber works with your existing infrastructure—EDR, NDR, CASB, UEBA, SIEM, SOAR—Dramatically better accuracy drives time to resolve from days to minutes.

Single Platform, Single Pane of Glass to Respond

Stellar Cyber's platform approach streamlines anomaly detection and investigation by creating context among events—single platform and single pane of glass correlates attacks and respond to all incidents.

Act Faster

Business Benefits

AUTOMATICALLY UNCOVER CYBERATTACKS

Expose and prioritize endpoint, network, user threats and compliance violations with actionable data.

SATISFY BUSINESS REQUIREMENTS

Extensible reporting with unlimited data and visualization possibilities.

STOP ALERT FATIGUE AND ATTRITION

Validate security alerts in minutes, improving analyst productivity and morale by reducing the backlog.

REDUCE BUSINESS IMPACT AND RISK THROUGH REDUCED MEAN TIME TO IDENTIFY (MTTI) AND MEAN TIME TO CONTAIN (MTTC)

Combine precise attack detection with rapid alert triage to drastically cut dwell time without requiring years of experience.

INCREASE ROI FROM CURRENT INVESTMENTS

Solve all your security needs through tightly-integrated capabilities while using existing infrastructure as sources and enforcement points.

Operational Benefits

SEE THE WHOLE PICTURE

Achieve visibility across cloud, endpoint, network, user, application & SaaS.

INCREASE SOC PRODUCTIVITY

Streamline operational processes to a single console by consolidating alert triage, detection and response across your on-premises and cloud environments.

STELLAR CYBER'S INTERFLOW™

Streamline anomaly detection and investigation by creating context among events.

ELIMINATE ALERT BACKLOG

Simplify investigations with automated root cause analysis and timeline views, lowering the skill required to evaluate and analyze alerts.

IMPROVE ACCURACY OVER TIME

Apply knowledge from every investigation to refine detection rules and speed future analysis, continually decreasing noise and risk.

GAIN INSIGHTS INTO ADVANCED THREATS

Uncover malicious insiders, policy violations, external threats, ransomware, file-less and memory-only attacks and advanced zero-day malware.
