## COMPANY QUICK FACTS

### Stellar Cyber—What We Do

Stellar Cyber’s Open XDR platform delivers Everything Detection and Response by unifying all currently independent security tools and data sources, and providing full visualization, automatic detection, investigation and response for all events across the entire enterprise attack surface.

### Stellar Cyber – How We Do It

Stellar Cyber’s Open XDR delivers Everything Detection and Response by 1) centralizing, normalizing and enriching security data from all existing security tools, 2) performing high-fidelity detection and automatic incident correlation with Machine Learning, and 3) automating response across an organization’s entire attack surface. Open XDR also simplifies security operations by unifying many capabilities such as NG-SIEM, UEBA, NDR, TIP, Malware Sandbox and Asset Management on a single platform under a single license. Open XDR can be deployed flexibly anywhere, on premise or in the cloud.

### Why Customers Need the Stellar Cyber Open XDR Platform

Stellar Cyber greatly reduces enterprise risk by the early and precise identification and remediation of all attack activities, while slashing costs, retaining investment in existing tools and accelerating analyst productivity. It also affords effortless deployment of sensors to fill any gap on premise or in the cloud.

### Stellar Cyber Narrative

Highly effective security today seems impossible. Nearly every organization today is actively being attacked, or already has been breached recently. Siloed tools may uncover signs of an attack, but they lack the context and breadth to produce a manageable number of precise incidents.

Talent, tools, and advanced offense make effective security operations an impossible economic choice for most organizations. Spending top dollar to be “good enough,” or accepting higher risk and keeping the bottom line healthier are unenviable alternatives.

The Stellar Cyber Open XDR platform eliminates the need to compromise between cost and security. Stellar Cyber pioneered and is the market leader in Open XDR, delivering an intelligent platform that serves as a digital shield and sword for organizations, giving them security peace of mind at a price they can afford.
