

Stellar Cyber NDR+

Stellar Cyber NDR+ unifies IT and OT in one platform for sharper detections, faster investigations, and stronger outcomes.

Lean security teams need highly automated solutions with dependable results. Stellar Cyber NDR+ goes beyond traditional network detection by unifying IT, OT, and cloud visibility, driving earlier detections, and powering faster investigations.

With NDR+, you protect your network across IT, OT, and cloud using existing staff and budget. Built on a unifying platform with **Multi-Layer AI™**, NDR+ deploys quickly and delivers results the same day — without complex setup.

How Stellar Cyber NDR+ Works

- Deploy Stellar Cyber sensors across IT, OT, and cloud environments.
- Automatically collect, normalize, and enrich network and identity data.
- Detect threats earlier with curated rules, ML, behavioral analytics, and real-time TI (including CrowdStrike Premium TI from 6.1).
- Correlate signals into high-fidelity cases with context from XDR, not just standalone network alerts.
- Investigate with **AI-driven narratives** and take decisive response actions.

Stellar Cyber NDR+ Benefits

Unify IT and OT Security

Visibility across factory floors, data centers, and cloud workloads.

Boost Analyst Efficiency: Multi-Layer AI

(ML, GraphML, LLMs, Agentic AI) summarizes cases, reconstructs timelines, and recommends actions.

Stop Threats Faster

Detect at ingestion, not hours later.

Drive Consistency

Apply a common posture across network, identity, cloud, and SaaS.

Scale Without Hiring

Automate triage and playbooks to close more cases per shift.

Increase ROI

Amplify existing investments while eliminating bolt-on complexity.

Automate Your Network Protection

Run NDR+ in semi- or fully-automated mode. Analysts can use prebuilt playbooks or create their own for tailored responses. Automation handles repetitive work, letting analysts focus on high-value cases — like adding a 24x7 threat specialist who never takes a break.

Flexible Deployment Options

Deploy anywhere — on-prem, in the cloud, at the edge, or across OT. NDR+ sensors cover packets, flows, and logs, plus OT protocols and industrial telemetry. This flexibility ensures complete visibility — from IoT to IT to OT — so you act before attackers succeed.

Stellar Cyber NDR+ Core Capabilities

Flexible Data Collection

Collect data from on-prem, cloud, and OT networks with sensors and pre-built integrations.

Comprehensive Data Analysis

Analyze packets, NetFlow, Sysmon, NGFW/IDS logs, and OT traffic for full-spectrum visibility.

Data Reduction

Filter intelligently so only relevant data is ingested, lowering costs without gaps.

Automated Threat Detection

Detect with ML, heuristics, signatures, and zero-day analysis — enriched at ingestion with premium TI. Correlate with other telemetry for stronger cases.

Data Management

Normalize and enrich all data to accelerate hunting, forensics, and compliance.

Prescriptive Threat Response

Respond manually or automate playbooks for rapid containment: block domains, isolate hosts, revoke accounts.

Take the First Step Today

Every team should deliver consistent protection across IT and OT networks — regardless of size or skill. With Stellar Cyber NDR+, you get more than NDR. You gain unifying detection and response across the full attack surface, backed by **Multi-Layer AI** to help you outpace attackers.

Visit www.stellarcyber.ai to start your journey.

By shining a bright light on the darkest corners of security operations, Stellar Cyber empowers organizations to see incoming attacks, know how to fight them, and act decisively — protecting what matters most. Stellar Cyber's award-winning open security operations platform includes NG SIEM, NDR, Open XDR, and Multi-Layer AI™ under one license. With almost 1/3 of the top 250 MSSPs and over 14,000 customers worldwide, Stellar Cyber is one of the most trusted leaders in security operations. Learn more at <https://stellarcyber.ai/>.
