Simplify Security Operations with ESET + Stellar Cyber

Why This Solution Matters

Today's lean security teams are overwhelmed by alerts, manual processes, and limited visibility. The integration of ESET Endpoint Security with Stellar Cyber Open XDR delivers a powerful, AI-driven solution that automates threat detection and response so your team can focus on what matters most: staying ahead of threats.

Key Benefits at a Glance

Advanced Threat Defense

· Detects ransomware and zero-day threats using machine learning, behavioral analysis, and cloud sandboxing.
· Real-time data sharing between ESET and Stellar Cyber reduces attacker dwell time.

Boost Analyst Productivity

· Pre-built integrations and playbooks streamline workflows.
· 20× faster Mean Time to Detect (MTTD) and 8× faster Mean Time to Respond (MTTR).

Unified Visibility & Automation

· Single-pane-of-glass management for endpoints, users, and threats.
· Automatically correlates alerts into prioritized cases, no more alert fatigue.

Maximize ROI

· Leverage your existing security stack while enhancing detection and response capabilities.

How It Works

1. ESET continuously monitors endpoint activity and sends threat data to Stellar Cyber.
2. Stellar Cyber ingests and analyzes this data alongside other sources to identify threats.
3. Analysts investigate and trigger response actions, which are sent back to ESET for execution.

Ready to Take the First Step?

Empower your security team, no matter their size or experience, with a solution that delivers consistent, automated protection.
